Summary

I am passionate about creating beautiful and functional websites that meet my client's needs. I have experience working with a variety of clients and enjoy collaborating with them to bring their visions to life.

I have had the privilege of working at start-ups. This journey has not only provided me with invaluable skills and insights but also allowed me to immerse myself in various aspects of development, making me a resilient and adept developer. My main focus these days is Career Growth and Advancement.

Experience

Senior Software Developer @Idealiner
July 2022 – Jan 2024

Worked as a full-stack developer independently to maintain the existing codebase of Leerecs and implemented and redesigned features on it. This reduced my fear of coding and gave me the ability to jump into any project and deliver tasks in the shortest time possible.

Software Engineer Intern @Snapbrillia
Jan 2023 – March 2023

I worked as QA automation and also fixed bugs. This experience not only strengthened my coding skills but also instilled in me a deep understanding of the importance of writing optimized and efficient code

Junior Software Engineer @Imperium Ltd
April 2020 – Feb 2021

Joining one of the best dev groups in Rwanda skyrocketed my experience as a developer of cool projects that attracted both the attention of their user and the media.
